

SPEYCASTING CLINICS ON THE VAAL RIVER

Alaska, Canada, Russia, Scotland, Argentina. These are all destinations now being offered to South African flyfisherman. The ability to Spey cast on these river systems is guaranteed to improve any flyfisherman's ability to cover water, control long lengths of line, and in turn, catch more fish.

Developed on the mighty River Spey in Scotland, this style of casting has revolutionised fishing on bigger river systems worldwide. Mavungana Flyfishing are the only outfitter in South Africa with three internationally certified spey casting instructors. Derek Manson (REFFIS, STANNIC), Mark Taylor (REFFIS) and Jonathan Boulton (REFFIS) have all worked abroad on river systems primarily utilising the Spey Cast in its varied forms. A weekend clinic will have you casting lengths of line you thought not achievable.

An accomplished spey caster can achieve casts of up to 45 metres with relative ease. You will learn the single and double spey cast, snap T and snake roll off both shoulders.

Even if you don't have a big trip planned where you will need this style of casting, you will enjoy an enlightening experience and learn a lot about the dynamics of this cast. Spey casting, and its sister casts are now used extensively by single handed flyfisherman, to achieve casts, and reach parts of overhangs, cast up against steep banks, and make trick casts to get your fly where it needs to be. The advantage of the double handed rod has unlimited potential, helping cover huge amounts of water on the likes of the Zambezi River and casting over breakers in the salt. Hosted one or two night clinics are available at various locations on the lower Vaal River, just a 2 1/2 hour drive from Johannesburg. All equipment is provided, meals are prepared by your instructors, and fishing and casting is right on your doorstep.
